## Product Description

### What is 99% Purity Cosmetics Raw Material Acetyl Hexapeptide 8 White Powder Peptide For Skin?

SNAP-8, also known as Acetyl Octapeptide-3, has been shown to improve skin structure and reduce wrinkles caused by facial muscle contraction. SNAP-8 is a string of eight peptides and is an analogue of . The two differ in terms of peptide chain length and the two additional peptides contained in SNAP-8 enhance the anti-ageing effect of the compound.

Similar to other anti-wrinkle forms such as Botox, SNAP-8 inhibits the contraction of muscles that control facial expressions, such as those near the forehead and eyes. SNAP-8 tends to compete with SNAP proteins for receptors on the SNARE complex to induce the release of neurotransmitters. When the receptors on the SNARE complex are compromised, the complex is unable to release neurotransmitters effectively, thus preventing involuntary and voluntary muscle movements.
